CDD VAULT

PROFESSIONAL SERVICES

DATA SHEET

CDD Vault Services combines deep scientific expertise with platform mastery that transforms your software investment into a customized informatics ecosystem. Scale with robust system integrations, workflow optimizations, and efficient data migration.

YOUR SCIENCE. YOUR WORKFLOWS. YOUR CDD VAULT.

Actively support your people, processes, data, and technology ecosystem with CDD Vault Services. Collaborative Drug Discovery provides dedicated expertise to configure, connect, and continuously optimize your research environment while supporting your unique scientific workflows. Get the best of human judgement and modern software.

CORE SERVICE OFFERINGS

- **Data Migration and Services:** Managed transition of complex chemical and biological data from legacy ELNs, LIMS, or localized spreadsheets into a collaborative cloud environment. Services include ongoing data uploads, expert formatting of data imports and exports, as well as the generation of customized Excel templates and reports.
- **System Integration:** Custom connections linking CDD Vault to third-party applications, laboratory instruments, dashboards, analytics pipelines, and AI-enabled workflows using robust REST APIs.
- **Custom Features:** Prioritized development and implementation of specialized capabilities and platform enhancements tailored to your unique computational and operational needs.
- **Dedicated Resources:** Expert engineers who understand your specific scientific workflows, compliance requirements, and business goals to accelerate platform adoption.

THE VALUE TO YOUR ORGANIZATION

Zero-Friction Adoption & Accelerated ROI
Dedicated engineers bridge the gap between software and science, allowing researchers to focus entirely on core discovery initiatives rather than system configuration or IT troubleshooting.

Absolute Data Fidelity & Continuity
Expert data mapping, cleansing, and verification ensure that valuable historical data – often at risk during system transitions or personnel turnover – is securely transferred, standardized, and protected long-term without translational errors.

Automated Data Ecosystems
Custom integrations eliminate manual data movement and information silos by piping data directly from automated screening platforms, laboratory instruments, and external collaborators into a single source of truth.

CDD VAULT®
Complexity Simplified

CDD VAULT PROFESSIONAL SERVICES

Tailored Platform Evolution
Sponsoring custom features allows your organization to directly shape the platform's development roadmap, ensuring your informatics infrastructure evolves in lockstep with evolving research demands.

Seamless Partnership & Trusted Execution
Leverage your existing business relationship with CDD to streamline engagement, eliminate procurement friction, and ensure your services are delivered by experts who already deeply understand your team, workflows, and goals.

OUR STREAMLINED PROCESS: FROM DISCOVERY TO OPTIMIZATION

Discover & Plan	Review current systems and objectives to create a clear implementation roadmap.
Design & Map	Data is structured and configured to ensure system readiness.
Implement & Migrate	Securely migrate data and set up the platform environment.
Connect & Integrate	Link laboratory instruments and external software directly to CDD Vault.
Adopt & Train	Enable teams with the training and resources to use the system effectively.
Optimize & Evolve	Provide ongoing support to ensure the platform scales with your research needs.

IDEAL FOR ORGANIZATIONS THAT ARE:

- Migrating from a legacy, siloed ELN or LIMS environment.
- Implementing CDD Vault across multiple distributed research teams.
- Connecting CDD Vault to existing enterprise systems, instruments, or applications.
- Building analytics or AI-enabled workflows requiring a centralized source of truth.
- Ingesting structural and assay data securely from CROs.
- Seeking dedicated, external technical expertise to scale operations without internal IT overhead.
